# alteryx

Product Overview

Alteryx Product Overview

Alteryx's intuitive data blending, and advanced analytics workflow allows you to:
1. Blend and prepare internal, third-party, and cloud-based data
2. Build powerful R-based predictive and geospatial analytic applications without any programming
3. Share deep data insights with business decision makers in hours, not weeks
4. Explore the Alteryx experience: http://www.alteryx.com/experience-alteryx

Alteryx Designer (help + documentation)
- Alteryx Designer empowers data analysts by combining data preparation, data blending, and analytics – predictive, statistical, and spatial – using the same intuitive user interface.
- Left panel on this page will give you options to deeper your understanding of what is included in Designer: tools, functions, data sources, etc.
- Alteryx Designer – Product page with system requirements

Intelligence Suite (help + documentation)
- Alteryx Intelligence Suite includes tools in the Machine Learning, Text Mining, and Computer Vision tool categories

Alteryx Server (help + documentation)
- Scale your Designer workflows across teams and organization-wide with Alteryx Server. Publish, share, schedule automated runs, and govern analytic processes, models, and data. Server provides a scalable server-based analytics solution that lets you create, publish, and share analytic applications, schedule, and automate workflow jobs, create, manage, and share data connections, and control data access.
